## Kelly's Gold Boxelder

*Acer negundo 'Kelly's Gold'*

Height: 40 feet

Spread: 40 feet

Sunlight: ☐ ☒

Hardiness Zone: 5a

Other Names: Manitoba Maple

### Description:

A fast-growing shade tree prized for its dazzling season-long foliage color, starting out gold and remaining a showy yellow throughout the season, can really stand out in a landscape, makes a great front yard accent tree

### Ornamental Features

Kelly's Gold Boxelder has attractive yellow deciduous foliage which emerges gold in spring on a tree with a round habit of growth. The compound leaves are highly ornamental but do not develop any appreciable fall colour. However, the fruit can be messy in the landscape and may require occasional clean-up.

### Landscape Attributes

Kelly's Gold Boxelder is a deciduous tree with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a high maintenance tree that will require regular care and upkeep, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Insects

Kelly's Gold Boxelder is recommended for the following landscape applications;

## **Planting & Growing**

Kelly's Gold Boxelder will grow to be about 40 feet tall at maturity, with a spread of 40 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
